Daclatasvir + Sofosbuvir + Ribavirin in HCV with Advanced Cirrhosis or Post-Liver Transplant ALLY-1 Study

DCV + SOF + RBV in Advanced Cirrhosis and Post-Liver Transplant ALLY-1: Results

ALLY-1: Features

- Design: Design: Multicenter, prospective, open-label, phase 3 study of daclatasvir plus sofosbuvir plus ribavirin in treatment-naïve and treatmentexperienced patients with advanced cirrhosis or post-liver transplant HCV recurrence.
- Setting: Five centers in United States

Entry Criteria

- Treatment-naïve or treatment-experienced
- Chronic HCV genotypes 1-6
- HCV RNA >10,000 IU/ml
- Cirrhosis (compensated and decompensated) allowed
- Post-liver transplant: received transplant ≥3 months prior to screening
- Outcome Measure: Primary = SVR12

DCV + SOF + RBV in Advanced Cirrhosis and Post-Liver Transplant ALLY-1: Conclusion

Conclusion: "The pan-genotypic combination of daclatasvir, sofosbuvir, and ribavirin was safe and well tolerated. High SVR rates across multiple HCV genotypes were achieved by patients with post-liver transplant recurrence or advanced cirrhosis."
